

TEAM: GH2O (Orono Middle School)

ISSUE: Ocean pollution

BREAKING BARRIERS

In the beginning, civilizations were small and demand was low. But soon civilization grew and demanded more and more materials, creating the industrial revolution. Factories and farms sprung up, production was great. However, unknown to those farmers and factory owner's. They were developing habits, bad ones in fact. They were polluting the water, creating a monster problem that is still alive today. Now, the problem has taken a different path. Veering away from polluting waters with chemicals and moving to something the growing economy of the world has had more and more demand for, plastic. Plastic is the new wave of pollution to strike the oceans and it needs to be stopped. And that is where we come in. for our World Savvy project we would like to break the barrier of habit. For thousands of years humans have been polluting the waters of our world. We believe that it must come to a stop, and now is the time.

OUR EVENTS

Sea Foam Fun Run

Sat, Jun 10 | Lake Minnetonka

About The Event

The Sea Foam Fun Run is meant to raise money to stop marine pollution all while helping the community get active. The Sea Foam Fun Run will take place around Lake Minnetonka (don't worry more locations coming soon) and will feature a 5k and 10k course. Some features of the run are a fun bubble after party, provided meal, reusable water bottle with cold water upon finishing the race, a reusable tote bag, live music, and a good time! Please note that online registration for this event is required and the race will go on no matter the weather (unless severe) so please dress appropriately! We hope to see you there!
